

OVO's on a mission to drive progress to zero carbon, and we call it Plan Zero.

Our commitment to reach net zero by 2035 can only be done with your help. By contracting with us via a power purchase agreement, we provide our domestic supply customers with traceable renewable electricity.

And our members want to help you too: by choosing us to support you with new subsidy-free connections, OVO offers a premium on REGOs as a way to support more renewable generation on the grid.

What is a Power Purchase Agreement (PPA)?

A PPA is a two way agreement between a renewable energy generator and OVO. As part of this agreement, OVO buys 100% of the site's exported electricity and associated REGO certificates.

OVO's Standard PPA offer

- A **fixed power** price reflective of the current wholesale market
- **100%** passthrough of your embedded benefits
- Competitive **REGO** offers

OVO's Subsidy Free REGO PPA offer

- A **fixed power** price reflective of the current wholesale market
- **100%** passthrough of your **embedded benefits**
- Competitive **REGO** offer, with a premium added on top to support you with project financing. Read more about our Subsidy-Free REGO PPA [here](#).

What you get from OVO

Income Security & Protection from Market Volatility

A fixed price PPA means you'll know exactly what you'll be paid for every MWh of electricity that you export to the grid, no matter how volatile current markets are.

Dedicated Account Management

At OVO we have a dedicated team that will manage your PPA from start to finish. We have extensive experience in managing PPAs and are readily available to answer your queries.

Self Billing Agreement

No need to worry about invoicing us for your energy, we'll do it for you. OVO operates a self billing service where we send you a monthly statement with a breakdown of the payment that we owe you.

Join the Movement - Plan Zero

By contracting with OVO and supplying us with renewable energy, you're supporting our domestic customers across the UK in achieving net zero. Read more about Plan Zero [here](#).

Ambition Community Energy

One of the renewable generators on OVO's Subsidy Free REGO PPA is Ambition Community Energy (ACE). This community-owned wind turbine in Bristol powers over 3,000 homes in the local community of Lawrence Weston. All its profits are reinvested for the benefit of the people who live there.

On the FiT scheme?

If your generation asset is on the Feed-in-Tariff (FiT) scheme, then you can apply to move this administration over to OVO's FiT team.
